

Multiple Companies

Multiple Companies

Consolidation:

Consolidated reporting across companies is available from both financial reporting and our Reports Engine to allow for both financial and custom user generated reports.

Divisions, Departments and Locations:

The EasyWorld Software system supports multiple companies, with multiple divisions within each company, with multiple departments within each division, and with multiple locations within each department. This is an ideal set-up for companies with many independent divisions, departments, or locations. Each division, department and location within an organization can record and manage their own general ledger, inventories and corporate data.

A company has divisions, a division has departments and a department has a locations. Each division, department and location is a separate entity and can be setup with it's own general ledger, inventory, customer list, vendor list, etc.

Whenever you are working within EasyWorld Software, you are always in a company, and a division, a department, and a location related to that company. If you do not want to track information by division, department, and location then the division, department and location for a company would be set to DEFAULT.
