

## **Multiple Currencies**

### **Multiple Currencies**

The EasyWorld Software system supports multiple currencies. Multiple companies can be setup with multiple currencies with multiple divisions within each company, with multiple departments within each division, and with multiple locations within each department, all having different currencies. This is an ideal set-up for companies with many independent divisions, departments, or locations. Each division, department and location within an organization can record and manage their own general ledger, currencies and corporate data.

A company has divisions, a division has departments and a department has a locations. Each division, department and location is a separate entity and can be setup with its own general ledger, currencies, inventory, customer list, vendor list, etc.

Whenever you are working within EasyWorld Software, you are always in a company, and a division, a department, and a location related to that company. If you do not want to track information by division, department, and location then the division, department and location for a company would be set to DEFAULT.
